

table of contents

Chapter 1 Training in the vicinity of the airfield

- 2 Introduction
- 2 Thermal recognition
- 5 Centering a thermal
- 9 Using other gliders as lift indicators
- 10 Thermalling entry and etiquette
- 13 Thermalling at a steady rate of climb
- 15 Audio variometers
- 16 Thermalling speeds
- 18 The effect of different wing loadings
- 18 Angle of bank
- 22 Drag
- 25 Practical hints
- 25 Problems arising while thermalling steeply
- 26 Avoiding sink
- 27 The importance of flying accurately
- 28 Spinning in gliders
- 30 Structure of thermals
- 33 Thermal formation and behaviour on a calm day
- 34 Finding thermals on blue days
- 35 Efficient centering in blue conditions
- 36 Thermal behaviour on windy days
- 41 Lift under cumulus clouds
- 42 Finding the core under large cumulus clouds
- 43 Lift towards the end of the day
- 45 The effect of humidity on thermals
- 47 Thermal spacing
- 47 Tactics just before and after launching
- 49 Overdevelopment and cycling
- 49 Dissipating cumulus clouds
- 50 The self-stoking effect of cumulus
- 51 Dust devils
- 54 Other sources of energy
- 54 Training with gliding simulators

Chapter 2 Weather and gliding

- 58 Introduction
- 59 The sun is hard at work
- 60 The importance of inversions
- 61 The Dry Adiabatic Lapse Rate (DALR)
- 62 The Environmental Lapse Rate (ELR)
- 63 An everyday practical example
- 64 The role of the dew point
- 66 Prediction of thunderstorms
- 67 Overdevelopment of cumulus clouds
- 68 Strength of thermal activity
- 71 Internet-based assessment of soaring conditions
- 72 The physics of air flow
- 75 Global pressure systems
- 80 Sea breeze fronts
- 86 A clue from the clouds above

- 89 The life cycle of cumulus clouds
- 92 Cloud cover
- 93 The "Skew T – Log P" diagram
- 95 The Tephigram

Chapter 3 Preparing for cross-country flying

- 98 Getting ready for road retrieves
- 99 A partnership with your crew
- 100 A checklist for taking a glider away
- 100 Preparation for longer flights
- 109 Do a pilot DI
- 110 Training aimed at cross-country
- 112 Getting help from a coach
- 114 "Lead and follow" coaching
- 117 Self-coaching
- 118 Team flying
- 119 What is a reasonable task for today?
- 121 The point of no return
- 122 What did I learn today?
- 123 The key word is training – proper training

Chapter 4 Local soaring & early cross-country

- 126 Introduction
- 127 FAI gliding badges
- 127 Risk, and stepping out of your comfort zone
- 129 Dealing with fear
- 130 Looking for lift when low
- 133 About birds
- 135 Wind shear
- 136 Air flow above the convection level
- 138 Cu-nim and thunderstorm conditions
- 141 Drift
- 142 Map reading
- 144 Mountain flying for flatland pilots
- 156 Flying with water ballast
- 159 Long distance flying
- 163 Simulators for virtual cross-country

Chapter 5 Landing out

- 170 Introduction
- 171 Your useless altimeter
- 171 Determining wind direction
- 173 Circuit planning
- 174 Field selection
- 178 The landing
- 180 After the landing
- 181 Dos and don'ts
- 183 Aerotow retrieves
- 184 Long term benefits
- 187 Outlanding training with motorgliders
- 187 Conclusion

Chapter 6 Advanced cross-country flying

- 190 Introduction
- 191 Are we using too many thermals?
- 191 Are we hanging on to a thermal too long?
- 191 Are we centering a thermal quickly enough?
- 194 Are we thermalling efficiently enough?
- 195 Is our meteorological navigation up to scratch?
- 196 Is our thermal selection good enough?
- 197 The cost of detours
- 201 Speed to fly
- 205 How important is cruising at optimum speed?
- 206 Probability of intercepting a thermal
- 207 Flying tactics on track and using height bands
- 210 Thermal streets
- 215 Dolphin flying
- 221 Haze domes
- 221 Leaving a thermal
- 222 Final glide
- 225 Flight analysis

Chapter 7 Winning the mental game

- 232 Planning
- 233 The importance of being fully focused
- 234 Positive thinking
- 236 Making decisions based on observation
- 239 Thinking ahead
- 240 Concentration and relaxation
- 244 Learn how to learn
- 244 Dealing with mistakes
- 246 Mental rehearsal
- 250 Confidence and over-confidence
- 251 Commitment and self-motivation
- 253 Setting a goal and achieving it
- 255 The effect of mood on performance
- 257 Decision fatigue
- 258 The formula for success
- 259 Analyse your flight
- 261 Learn from the experts
- 261 Believe in your ability to succeed

Chapter 8 Flying competitively

- 264 Choosing a competition class
- 264 Preparing for your first competition
- 266 Get to know the contest area
- 267 Starting a race
- 269 Out on a competition task
- 273 Winning by not losing
- 273 Turn points
- 278 The problem of stress in competition
- 281 Shaving off the seconds
- 282 Risk management
- 283 Staying fit for the duration of the contest
- 284 Is the mature glider pilot disadvantaged?

Chapter 9 Let's get technical

- 288 Getting the most out of the glider

- 289 Types of variometers
- 292 Your unreliable variometer
- 294 Getting the variometer set-up correct
- 296 Optimising a glider's center of gravity
- 297 Why winglets work
- 299 Use of flaps
- 303 Bug wipers
- 304 Visibility improvements
- 305 GPS navigation
- 306 Using the radio
- 308 FLARM
- 311 Satellite personal tracking systems

Chapter 10 Ridge lift and slope soaring

- 315 Introduction
- 315 Theoretical fundamentals
- 316 Conditions affecting ridge soaring
- 317 Obstacles upwind of the ridge
- 319 Ridge lift and thermals
- 320 Katabatic and anabatic winds
- 321 Changes in wind direction and strength
- 322 Flying tactics
- 323 Flying well above the ridge
- 324 Rules of the road
- 324 Dangers
- 326 Pure excitement in New Zealand

Chapter 11 Wave lift

- 332 Introduction and some history
- 334 Topography
- 336 Lee wave air flow and terminology
- 337 Meteorological conditions
- 338 Wavelength
- 338 Amplitude
- 339 Moisture
- 340 Rotor and lenticular cloud formation
- 341 Shear wave
- 342 Thermal wave
- 343 The hydraulic jump
- 347 High altitude dangers
- 355 The practical aspects of wave flying
- 359 Wave safety
- 362 The effect of crosswind on ground speed
- 363 A practical example
- 365 Bands of thermal wave
- 366 The Morning Glory
- 370 Dynamic soaring

Appendices

- 375 A Soaring meteorology by region
- 393 B Human factors
 - vision, airsickness
- 403 C Safety equipment
 - cushions, lumbar support, chutes, FLARM
- 408 D Motorgliders
