Performance of JXIDA OUTDOOR Covers

Storm security - means, the material is even at strong winds tearproof. In addition all covers get secured by strings or strong straps, so nothing will loosen. Because they fit perfectly, because they're made to measure everything stays in its place also during strong winds.

For any weather - the materials are for sunny weather (up to +80°C) and deep cold and snow (up to -20°C). This way security during summer and winter is assured. Our AIR Basic/Extend/Pro- and Xtreme- Material is waterproof with a head of water from 9000mm.

jaxida cover

Easy handling – the covers are produced in a way which makes handling by one person possible.

UV-Resistance – the material is strong even during high and aggressive UV-radiation. Plastic or other materials get destroyed by UV-radiation. They get porous and rip. The Jaxida material stays strong and protects.

Dirt resistant – dirt, algees, bird excrements, exhaust and similar influences are kept out and cannot harm the material.

Colours - the covers are available in white or a light grey. Why such light colours? Light colours protect the best from heat underneath. Already a light grey gets 3-5°C warmer than the outer temperature.

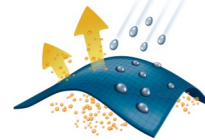

jaxida cover

Paint work and surface protection - all covers are soft on the inside. This provides the protection of scratches or friction.

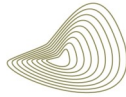

Cleaning – the covers are easy to clean. Some covers can even be washed in a washing machine. Others can be cleaned with a special liquid soap (29,99€) which can be bought from us. This liquid soap protects also again from all kinds of dirt.

Breathability – the material is waterproof (9000mm) and breathable. This way, your aircraft can „breathe“ and all humidity can diffuse to the outside.

Lifetime – a Jaxida cover lives - depending on the care - up to 15 years. A guarantee is included for 2 years, a guarantee up to 5 years is also available.

jaxida cover

What was once covered in Denmark – grows in southern Germany

The name Jaxida, honours Verner Jaksland, the company's founder and cover designer. Since 1992 Jaxida has made the world's finest glider covers. To create the name he coupled his nick name "Jaxi" with "da" for his native Denmark...

Now the Schwenks, a well known gliding family own the company and are proud to further develop Jaxi's ideas and to produce Jaxida covers in their home town of Münsingen, Germany.

Verner Jaksland knew he had to protect his expensive ASW22 glider from damaging UV radiation, condensation, dirt and rain. However he did not want to de-rig his glider each night. So he developed a unique combination of high quality fabrics carefully shaped to do the job. He then went on to design and manufacture beautifully crafted, easy to use covers for almost every type of glider.

Today Verner's Jaxida covers are the bench mark for cover performance and famous throughout the global gliding community. His high performance Jaxida covers are seen on more gliders by far than any other make. As well there are products to cover microlight aircraft, boats and motor cars.

jaxida cover

Jaxida has become synonymous with quality, service, research and development and innovative design.

The Schwenk family have been cutting cloth and selling clothes since 1834. They know the trade!
Uli, a German National Champion travels the world competing in International Gliding Grand Prix and World Championships. He knows how important a glider's cover can be in the harsh environments found in places like Nevada, Europe, New Zealand, Southern Africa and Chile.
Uli also is an instructor for powered aircrafts and microlights.

Before buying the company in 2009 he was the German Jaxida agent so he knows the product!

Meanwhile Jaxida is an important supplier for all Sailplane, Powered aircraft producers like Alexander Schleicher GmbH & Co. KG, Diamond Aircraft Industries GmbH and even for a big German car manufacturer Jaxida is their first chosen supplier.

The Jaxida Team is a very special Team. It works with lots of fun and high demands to produce the best product.
